# Health Risks Status at the ZIP Code Level

- The Hurricane Health Risk Index identifies the health and medical risks to the population at the ZIP Code or Census tract level.
- Risk analysis is based on social and environmental determinants of health, disease prevalence data, population demographics, and other factors that convey risk of adverse health outcomes when exposed to a tropical storm/hurricane.
- On the ground data, such as evacuations, road closures can be ingested as well.
- Index developed with support from FEMA, funding from the USGS and NASA, and data from authoritative governmental sources, e.g., CDC, CMS, Census, and other federal & state sources.

# Risk Data Available in Multiple Formats

- Risk Data is available in natural language text response, interactive map, as well as downloadable table and pie chart.
- Available data formats include CSV file, Excel spreadsheet, and other formats.
- The underlying factors contributing to the risk in each ZIP Code are available as well.
